Professional Experience includes responsibilities in design and construction phases of projects ranging from developer originated commercial, retail and housing commissions, primarily on urban sites, to religious facilities and corporate interiors throughout the country. Project management focuses on generating and developing conceptual design and site planning solutions for a diverse resume of building types and clients.

Licensed in the states of Illinois, Iowa, Michigan, New Jersey, New York, Pennsylvania, Wisconsin, and Utah.

PASMA GROUP ARCHITECTS

History... PASMA GROUP Architects has been in practice since 1988 and is currently staffed by ten people. The firm has enjoyed a steady growth based on a high standard of professional service and personal attention to clients

Nature of Practice... PASMA GROUP Architects provides full architecture, MEP engineering, interior design / space planning, landscape architecture, land planning services for new and renovated facilities.

Design Philosophy... Creative Leadership and Teamwork are the core of the firms philosophy. A team is created by organizing representatives of each discipline to work closely with you, our client, in addressing your specific needs. A successful PASMA GROUP design is one that projects the desired image and serves the people who use it with attention to both budget and schedule. A firm's principal maintains direct personal involvement and assumes ultimate responsibility for client satisfaction.

Staff... the PASMA GROUP professional staff consists of (5) architects, (1) interior designer and (6) cad technicians.

Project Organization... Each team is led by an experienced project architect who directs the various disciplines during the design and contract process. Each project team represents a cross section of our talents and capabilities.

Services... As a full service architect / interior firm, PASMA GROUP Architects' comprehensive design capabilities permit the firm to tailor our services to respond to specific design requirements of this project and specialized needs of whatever the project scope.

Professional Profile

03

PASMA GROUP ARCHITECTS

Design approaches and philosophies are as varied as the architects that embrace them. I have been fortunate during the course of my education and professional development to have experienced firsthand the design philosophies and methodologies of two architects who have shaped our profession. One espoused a design methodology which drew upon the power of the designer's subconscious and its ability to echo and reflect the images of one's mind that are gathered over a lifetime. The other embraced historical intellectualism as the primary inspiration for his designs. While I have great admiration for the work of both of these gentlemen and I value their influence on me as I value their mentorship of me, I nevertheless believe that both of these approaches are essentially

egocentric in nature and are therefore rooted in the individual and his personal expression. By contrast, I have chosen to pursue my own design philosophy and methodology from a more inclusive and egalitarian point of view, choosing to develop a process that instead expresses the "relationship" between the design team and the Church organization. Our philosophy can be described by the following:

Listen...in order to...Learn...and then...Creatively Lead

We will listen purposefully and intently to the voices of those who have conceived and envisioned the project thus far.

We will learn the nature and needs of the project and the Church, as well as those of the design team by a direct and interactive process of enquiry and discovery. The goal will be to understand and assemble the individual programmatic parts - the hopes, wishes, needs, and wants - into an elegant, structured, and hopefully, simple vision which all of the participants can begin to relate, to interact with, and ultimately to take ownership of.

Every project has its own voice. It speaks the values of its owner, the hopes of its occupants, the needs of its community, the prides and prejudices of its site, and the vision and sensitivity of its designers. The truly great projects are those where the project's voice is clearly heard by all. We feel strongly that this project must be "Kingdom Driven". We believe that its purpose is of the highest calling and we would welcome and appreciate the opportunity to be a critical creative member of Your Project Team.

We will creatively lead the project team and the design process by clearly communicating - graphically, diagrammatically and spatially - a thoroughly considered and well thought out design concept that is fully informed by its program, community context, and by the essential character of the Church itself.

Statement of Design Philosophy
